# Hatcher basket destacker

## Benefits

For the safe, stable destacking of hatcher baskets, the destacker automatically breaks down a stack to supply empty hatcher baskets ready for re-use, for example via an automatic transfer system. The destacker accommodates baskets stacked lengthways or crosswise, so it is suitable for use in every hatchery situation. Easy-to-run and operator friendly with very low noise/vibration emissions. Requires zero-to-minimal maintenance for a long life.

## How it works

- A stack of empty hatcher baskets is transported to the destacker
- The stack is automatically loaded into the destacking unit
- The destacker raises the entire stack upwards, leaving the bottom basket on the conveyor, which is transported to the transport conveyor system
- The remaining stack is lowered onto the conveyor and the entire stack, without the bottom basket, is then raised again
- This sequence is repeated until the entire pile of baskets has been destacked and a new stack is loaded into the system

Individual hatcher baskets are fed into an automatic transfer system after being destacked

## Technical Specifications

Capacity	> up to 800 hatcher baskets/hour
Max. lifting capacity	> 250 kg
Installed power	> 5.5 kW
Air consumption	> 33 litre/min at 8 bar
Dimensions (LxWxH)	> 1648 x 1600 x 1635 mm (excl. conveyors and manual loading station)
Material	> Constructed of stainless steel AISI304 for easy cleaning with high-pressure equipment
Including	> Easy operating control unit and adjustable stack height
IP Marking	> Motors IP55 > Sensors IP68 / IP 69 > Control panel IP66
