Integrated Hatchery Solutions

# Dolley washer

## Benefits

Effective, space saving washing machine, specifically designed to clean hatcher dollies thoroughly. A spray nozzle system ensures that the high pressure hot water spray reaches all areas of the dolly inside and out, while an automatic transport system ensures the continued infeed of dirty dollies. Hot water can be supplied by the washer's integrated electrical heating system, or by using a heat exchanger in combination with the hatchery's hot water supply. Click-on nozzles are easily replaced for ease of maintenance and the machine's durable stainless steel design delivers durability and long lasting performance. The washer can be installed with a ramping system for easy loading or at a lowered height for floor level in- and outfeed. Thorough and effective cleaning for moderate pollution levels.

## How it works

- A dirty dolly is positioned on the infeed of the washing machine, where it is automatically picked up by the transport conveyor
- The conveyor moves the dolly automatically through the washing machine at a constant speed, where it is cleaned thoroughly inside and out and into the corners with hot, pressurised water
- After washing, the dolly is automatically pushed out of the machine, ready to be re-used

Effective, space saving washing machine, specifically designed to clean hatcher dollies thoroughly
